StrataCom Whitepaper

How to control which Service Manager tables are available for Searching in the "Look For" dropdown while in the Search

First go to the Database Manager and type "SearchConfig" in the "table" field. Then do a true search and bring up any of those records. Then, open the screenshot above and you will see the "Allow Advanced Find" field on these "SearchConfig" table records. This needs to evaluate to true at startup for a user to be able to see these choices in that dropdown. Place what you see in the field circled in red in the attachment above in those SearchConfig records for only those ones that you want sys admins to see.

To display additional items for users with the SysAdmin capability word, use this expression in the 'Allow Advanced Find' field: `index("SysAdmin", $lo.ucapex)>0`
